1988				
1989	Sweden			<div><div>Current Occupation</div><div>The role of Process & Method Manager at Skanska Sweden IT entails an overarching responsibility for all of our processes and methods within the company. As an IT Service Management organization, we have adopted around 20 processes from the ITIL framework over time – each with its own Process Owner and Manager assigned. I steer the process/method development together with our Process Managers and report to the Process & Method Governance Board, in which all Process Owners are represented. The goal is to ensure that we have effective, efficient, and well-known processes/methods that enable us to meet the needs of our customers. I've set up a governance model for all related evolutionary activities we wish to take on, and develop plans for how they are to be prioritized over time.</div></div>
